## Facing Two Deadly Forces

While attempting to escape from a fire, there are two things you need protection from. The first is smoke. Toxic and poisonous, smoke inhalation is your first and most critical concern. The second is the fire itself. In order to survive, you must be able to navigate through the fire without sustaining serious burn injuries.

## Escape Gear Packs

Ceasefire's Escape Gear is designed to protect you against these very forces. Each Escape Gear Pack contains two Fire Escape Masks and two Fire Escape Blankets. Together they provide the protection to escape safely from the smoke and fire.

Ceasefire Fire Escape Gear, Mild Steel Box size 425mm × 360mm × 140mm, Epoxy powder coated to protect it from weathering, Smoke Hood: Tested to European Standard EN 403: 1993-S, Known to reduce Carbon monoxide, propenl (acrolein), hydrogen chloride, hydrogen cyanide and solid & liquid toxic particles to manageable level for at least 15 minutes, shall withstand temperatures upto 80° Deg, Single Use only, Fire Blanket Size: 1.2m × 1.8m, Used to cover any vessel containing the fire completely, Used to extinguish a clothing fire wrap blanket around victim.

## Fire Escape Masks

Fire Escape Masks are made of imported fire retardant materials. A special smoke filtration system, with more than one million micro filters, provides clean, breathable air for up to 30 minutes. More than enough time for you to safely evacuate the premises.

## Fire Escape Blankets

Fire Escape Blankets are easy to slip on in an instant and large enough to cover and protect anyone. They are made of imported silicon coated fire retardant material, and have been designed to ensure that your body gets the maximum possible protection as you make your escape.
